ABOUT US

ABOUT DR SEJAL RAI

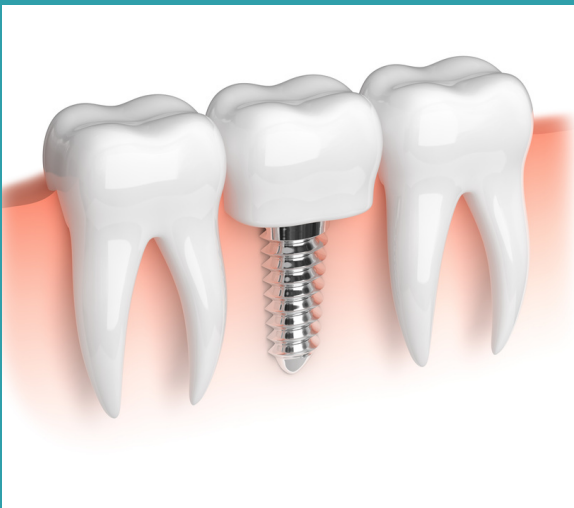

Dr Rai has a diverse background. After growing up in central Africa, completing her secondary education and Bachelor's degree in the US, and completing her Doctor of Dental Medicine degree at the University of Sydney, she is well-positioned to treat all patients. With a keen eye for precision and a great chairside manner, she is described by her patients as being caring, kind and totally committed to patient care.

WHAT ARE THEY?

Dental implants help replace missing teeth. Unlike dentures, dental implants are not removable and give you much more freedom in your day to day life.

A dental implant looks similar to a screw. It is made of titanium and is placed into the jaw where the roots of the missing tooth used to be. A crown, also known as an artificial tooth, is then placed on top. This is the part you can actually see!

BEFORE

AFTER

BENEFITS

- Fully restores chewing ability which means you can say YES to all your favourite foods
- Functions and looks exactly like a natural tooth
- Dental implants are a long-term solution - if properly cared for, they can last a lifetime
- Getting your wonderful smile back!
- Easy to care for - just brush and floss!
- Allows for natural and comfortable speech

FAQ

1. Does it hurt?

The area in question will be numbed with local anesthesia. There may be some slight discomfort, but it's nothing to worry about and the procedure is relatively painless. Remember, we're here to help you all the way! Some patients experience slight discomfort after receiving their implants, but the feeling tends to fade after 1 to 2 days.

2. How do I take care of my implants?

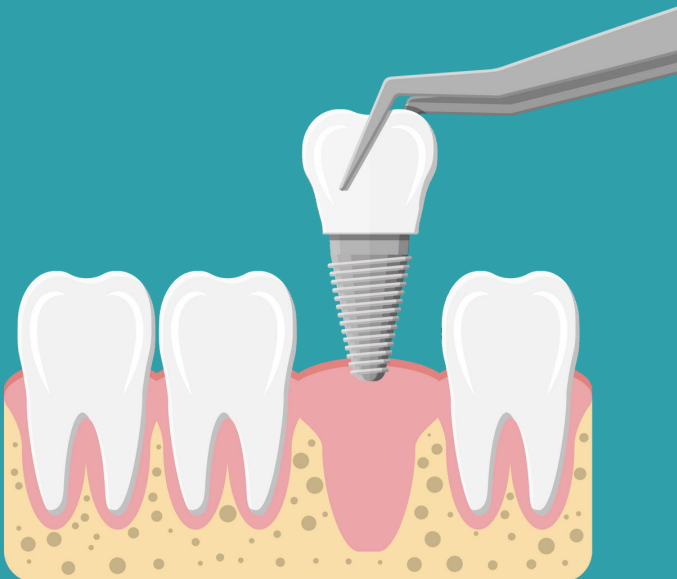

Brushing your teeth and flossing twice daily is super important! A soft-bristle toothbrush is also a good idea.

FAQ

3. How much do dental implants cost?

Dental implants are a great long-term investment. They can cost less than alternative forms of restorative dentistry since they are less prone to breakage. With the right care, dental implants are the most cost-effective restorative treatment in the long-run. But there is a second aspect to this investment: your quality of life. Dental implants help boost confidence in terms of giving you the smile of your dreams as well as significantly improving oral health.

DIGITALLY GUIDED IMPLANTS EXPLAINED

Here at Dentistry on Solent, we strive to give you the best possible treatment. So, we started to use a digital implant system.

During a conventional dental implant procedure, the gum is opened up, the implant placed and the gum is then sealed. But now, with computer-guided digital implant surgery, the implant is carefully placed through the gum without having to raise the gingival flap.

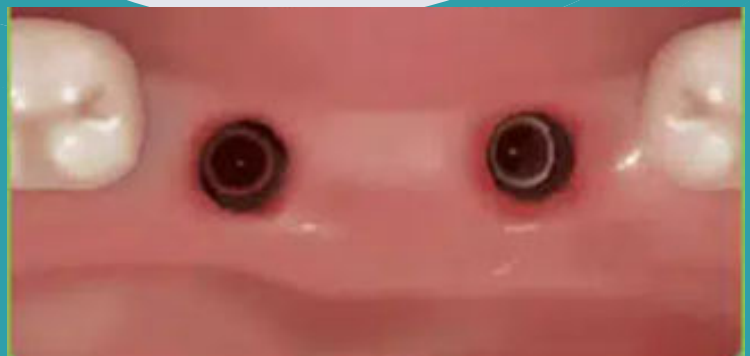

For the patient this means:

- Decreased time spent in surgery with minimal risk
- Minimal bleeding, if any, with no sutures
- Less trauma to the area for speedier post-surgical recovery

PAYMENT PLANS

We offer 3 main payment plans for dental implants. These include:

1. Paying \$20 per week over a period of time
2. Paying cash
3. Paying through superannuation

CONCLUSION

All in all, dental implants are an amazing way to uplift your confidence and your quality of life. Lasting for a lifetime when properly cared for, they are cost-effective, whilst looking perfectly natural.

We're here to help you all the way. If you have any questions, don't hesitate to reach out at 02 9158 6137.

If you would like to discuss dental implants further, we offer a free implant consultation. Dr Sejal Rai will assess your teeth, walk you through the procedure and give you personalised information. Just hop online and book an appointment, and we'll take care of the rest!
